THEME

THE THEME

Running a scan for OSINT data on an attack surface is like a submarine sweeping the ocean floor with sonar – probing the dark for signals, surfacing only what the target has unknowingly left exposed.

THE OCEAN

The deep-navy palette evokes crushing depth and the unknown. Just as the ocean conceals what lurks beneath, a target network hides its vulnerabilities until something with the right instruments looks closely enough. PenFlow allows the user to see for themselves.

THE SUBMARINE

The submarine is the product's spirit animal: it operates silently, reads its environment through sonar, and surfaces only with actionable intelligence.

THE SCAN

Cyan is the sonar pulse – sent out into the dark and returning with what it finds. Every interactive element that confirms an action or surfaces data uses cyan, the same way a submarine's sonar cuts through the unknown and brings the hidden into view.

SECURITY & TRUST

Despite the dark aesthetic, the UI must feel controlled and trustworthy – not chaotic. Tight grid alignment, deliberate whitespace, and restrained motion signal expertise. Red (#FF544E) surfaces danger without panic. The overall effect is a product that feels like it has already assessed the situation and is calmly reporting back: *you are in capable hands*.

TONE

TONE

BUILT FOR EVERYONE

Security tooling has a reputation for being impenetrable. PenFlow pushes back against that. Whether the user is a CTO reviewing an executive summary or a junior developer seeing a CVE score for the first time, the interface meets them where they are. Labels are written in plain language first, technical identifiers second. No user should feel like the product was built for someone else.

FRIENDLY, NOT CASUAL

Approachable does not mean informal. PenFlow is friendly in the way a trusted expert is friendly – warm enough to make a first-time user feel welcome, precise enough to make a seasoned analyst feel respected. Copy avoids jargon walls and acronym soup, but it also avoids over-explaining to people who clearly know what they are doing. The interface reads the room and responds accordingly.

EXPLAINING THE SYSTEM

Key sections of the UI carry short contextual explanations – not tooltips buried behind hover states, but visible, readable callouts that explain what a section shows and why it matters. A user who has never run a penetration test should finish their first PenFlow report with a clearer understanding of their attack surface than when they started. Education is a feature, not an afterthought.

TONE IN PRACTICE

A scan completion is confident: *"Scan complete – 14 findings detected."* A critical finding is sober: *"Critical · Port 22 exposed to all traffic."* An explanation panel is reassuring: *"This means your login page is reachable without authentication. Here is what to do next."* Same product, same voice, adjusted for what the user needs in that moment.

ANIMATION

ANIMATIONS

Using AnimeJs simple animations communicate state changes the eye would otherwise miss.

`motion.fast`

150ms ease

Hover colour changes, border transitions, icon scale

NAV ITEM

`motion.normal`

180-200ms ease

Button backgrounds, input focus borders, nav highlights

SCAN NOW

`motion.slow`

300-400ms ease

Process state transitions (scan step completion), modals

RECON

SCAN

REPORT

`radar.sweep`

4s linear = linear

Radar animation on scan console – signals active scanning

`radar.ping`

4s = staggered keyframes

COLOUR

BACKGROUND SCALE

NAVY

--col-navy · #060e1c
primary bg · page

DEEP

--col-deep · #091628
card bg · sidebar

ABYSS

--col-abyss · #0d1e3a
tertiary bg · hover state

ACCENT & SEMANTIC

FOCUS

--col-cyan · #2bd8ff
#2bd8ff

INFO

--col-blue · #4f9fff
#4f9fff

SUCCESS

--col-success · #4ade80
#4ade80

MEDIUM

--col-yellow · #ffcc00
#ffcc00

HIGH

--col-orange · #ff8030
#ff8030

ALERT

--col-alert · #ff5f4e
#ff5f4e

TEXT & BORDER

TEXT

--col-text · #e5f3ff
primary body text

MUTED

--col-muted · #4a7a9b
secondary text · labels

EDGE

--col-edge
default border

EDGE-HOT

--col-edge-hot
focus / active border

TYPOGRAPHY

PenFlow uses two typefaces.

Bebas Neue (`--font-display`) is the tactical voice – uppercase, condensed, and mission-critical.

Rajdhani (`--font-body`) is the operational voice – readable at density, technical, precise.

display	48 / 56	PENFLOW	body-lg	18 / 28	Identified 14 open ports across 3 hosts.
heading-1	32 / 40	SCAN REPORT	body	16 / 24	CVE-2024-21626 allows container escape.
heading-2	24 / 32	CRITICAL FINDINGS	caption	12 / 16	Last scanned · 2025-05-21 · 14:32 UTC
heading-3	18 / 24	EXPOSED ASSETS	mono	14 / 20	192.168.1.1:8080/4

WEIGHTS ARE A LADDER

400 / 500 / 600 / 700

Each weight has a job. Regular (400) carries body copy. Medium (500) adds emphasis without shouting. Semi-bold (600) anchors labels, nav items, and UI controls. Bold (700) is reserved for display numbers and critical values where the figure itself needs to land before the label is read. Mixing adjacent weights flattens the hierarchy – step at least two rungs when creating contrast.

Scan results surface public signals attackers can already inspect. 400

8 findings across 3 exposed services. 500

TARGET DOMAIN 600 - LABEL

12 700 - DISPLAY NUMBER

LETTER SPACING

TIGHT DISPLAY, OPEN LABELS

Headings use `letter-spacing: 0.06em`. Nav and eyebrow labels use `0.1–0.22em`. Code and table cells use `0` – monospace already carries visual rhythm.

SCAN REPORT

0.06EM - HEADING

04 · DESIGN PRINCIPLES

DESIGN PRINCIPLES

CONSISTENCY

Same element, same look, every page. The user learns the interface once and applies it everywhere.

EXAMPLE.COM

History page

CRITICAL

192.168.1.1:22

Report findings table

CRITICAL

Same badge padding, radius, colour, and font across both pages.

SIMPLICITY

Every element earns its place. Empty space gives critical information room to land – when in doubt, leave it out.

SEVERITY

CRITICAL

PORT

22 / SSH

Two data points, no decoration – the finding is immediately readable.

ACCESSIBILITY

PenFlow is built for every organisation, not just security experts. The interface must never assume prior knowledge.

WHAT IS A CTM SCAN?

THE SCAN STARTS WITH YOUR DOMAIN AND FOLLOWS PUBLIC SIGNALS: SUBDOMAINS, DNS RECORDS, CERTIFICATES, AND EXPOSED SERVICES.

PENFLOW GROUPS THOSE SIGNALS INTO ASSETS AND FINDINGS, HIGHLIGHTS SUSPICIOUS EXPOSURE, AND PREPARES A COMPREHENSIVE REPORT.

Plain-language explainer shown to users before their first scan – no assumed knowledge.

LOGO & ICONOGRAPHY

PenFlow is a joint product of Bluevision and BroCode. Both logos appear together in the navigation bar.

BUTTONS

SIZING & SPACING

Buttons use `clamp()` font sizing with `0.08em` letter spacing. Padding is `12px 28px` for standard buttons, `height: 48px` for pill variants. Minimum touch target is 44x44px. Never place two primary buttons side by side – one primary action per context.

SEVERITY BADGES

SIZING & COLOUR

Badges are `padding: 2px 9px`, `border-radius: 4px`, font size `0.68rem` in Bebas Neue. Text colour is always `#0a1628` (dark) – never white – on the severity background. Minimum width is dictated by the longest label (CRITICAL).

PLACEMENT RULES

Badges always appear to the right of the asset or finding they describe – never above or below. They are right-aligned in table cells. A badge must never appear without the text label; colour alone does not satisfy accessibility requirements. Do not resize badges or change their border-radius.

CARDS

SIZING & SPACING

Cards use `padding: 28px 32px` on desktop, `border-radius: --radius-xl (14px)`, and a `1px solid --col-edge` border. Background is `--col-deep`. Internal elements follow a consistent stack: label → title → body, each separated by `10-12px`.

↑ highlighted gutters show 28px top, 32px sides –

`report.module.css`

ACTIVE STATE

When selected or focused, border upgrades to `--col-edge-hot` and a `--sh-glow-cyan` shadow is applied. No background colour change – the border and glow are the only visual indicators. The card does not shift or resize on activation.

FORM INPUTS

TARGET DOMAIN

FOCUSED STATE

ACCESSIBILITY

COLOUR CONTRAST

PenFlow targets WCAG 2.2 Level AA throughout. Body text (`--col-text` on `--col-navy`) achieves 12.4:1 – well above the 4.5:1 minimum. Large text and UI components require 3:1. Severity badge text uses `#0a1628` (dark) on the severity colour; all severity colours meet the 3:1 threshold. Never render informational text in `--col-muted` alone against a dark background – it does not pass at small sizes. When in doubt, use a contrast checker before shipping.

GOOGLE LIGHTHOUSE

Google Lighthouse is an open-source automated auditing tool built into Chrome DevTools that analyses web applications across accessibility, best practices, performance, and SEO. It surfaces issues like missing alt text, poor contrast, absent ARIA labels, and non-semantic markup before they reach users. The scores shown are actively maintained – any drop is fixed before the next release.

Accessibility

Best Practices

WCAG 2.2 COMPLIANCE

PenFlow targets WCAG 2.2 Level AA. Each criterion below is mapped to a concrete implementation in the frontend.

1.4.3 CONTRAST

4.5:1 minimum for body text.

`--col-text` on `--col-navy`
12.4:1 ✓

1.4.11 NON-TEXT

3:1 for UI components and focus indicators.

Focus ring on Input

3.3.1 ERROR ID

Errors name what failed and suggest a fix.

Invalid domain – check format and try again.

3.3.2 LABELS

Visible labels on all inputs – no placeholder-only fields.

TARGET DOMAIN
example.com

4.1.2 NAME ROLE

Semantic elements with ARIA where needed.

```
<button>Scan
Now</button>
aria-label="Search"
aria-hidden="true"
```

SEVERITY LABELS

Colour never used alone – text badge always present.

CRITICAL HIGH
MEDIUM PASS

Penflow Wireframe_{v1}

Penflow is a service meant for domain owners that want to scan the attack surface of their domain to see potential threats and insecurities.

This wireframe covers the use cases that will be presented in demo 1, thus it does not cover the full scope of the project.

Landing Page

Penflow is a security service intended for domain owners that may not be well versed in cyber security. Thus a theme was utilised to help the user visualise how Penflow helps them as a service

For phase 1 users are able to initiate a CTEM scan, which scans the attack surface area of their domain. An ocean theme with a submarine is used in the UI to present the analogy of a submarine scanning the ocean using SONAR.

Infographics in the Home page

In order to accomodate users that are not well versed in cyber security the home page has a number of explanatory components that explain how the SCAN works and why the user should use the PENFLOW service

IS YOUR DOMAIN IN DANGER?

ATTACKERS DO NOT NEED CREDENTIALS TO START PROFILING YOUR ORGANISATION. FORGOTTEN SUBDOMAINS, LEAKED METADATA, EXPOSED SERVICES, AND PUBLIC RECORDS CAN QUIETLY REVEAL WHERE TO AIM NEXT.

WITHOUT REGULAR CTEM SCANS, SMALL PUBLIC CLUES CAN BECOME A MAP FOR PHISHING, IMPERSONATION, ASSET DISCOVERY, AND TARGETED INTRUSION ATTEMPTS BEFORE YOU REALISE THE EXPOSURE EXISTS.

WHAT IS A CTEM SCAN?

THE SCAN STARTS WITH YOUR DOMAIN AND FOLLOWS PUBLIC SIGNALS: SUBDOMAINS, DNS RECORDS, CERTIFICATES, EXPOSED SERVICES, METADATA, AND OTHER OSINT CLUES ATTACKERS CAN ALREADY INSPECT.

PENFLOW GROUPS THOSE SIGNALS INTO ASSETS AND FINDINGS, HIGHLIGHTS SUSPICIOUS EXPOSURE, AND PREPARES THE EVIDENCE YOUR TEAM NEEDS FOR A CLEAR CTEM REPORT.

100% SAFE & PASSIVE

WE DON'T TOUCH YOUR SYSTEM. OUR SCAN USES TRUSTED THIRD-PARTY SOURCES AND OPEN DATA, ENSURING LEGAL COMPLIANCE AND ZERO RISK TO YOUR ENVIRONMENT

WE WILL GENERATE YOU AN EASY-TO-UNDERSTAND REPORT INSTANTLY, NO ACCOUNT NEEDED! DISCOVER WHAT ATTACKERS CAN SEE ABOUT YOUR ORGANISATION NOW

Initiating a CTEM scan

A SONAR-like animation will play once the user initiates the scan. Its purpose is to keep the user engaged and plays into the theme of scanning

- The Scan “Terminal” is designed to look like a submarine sonar interface.
- Deliberate design decision to keep the user engaged.
